Lochbuie, CO 80603

RE: Letter of Support

To whom it may concern,

We are writing this letter to recommend the professional engineering services of FEI Engineers. Since 2014 the Town of Bennett has been working directly with FEI Engineers for the following projects:

1. Decommission of an existing water tower
2. Construction of a new elevated water storage tank
3. Planning, engineering construction of our water and wastewater treatment plant.

FEI Engineers was a godsend with upfront information that had detailed expectations and guidance from their design review. FEI Engineers is easy to work with in all aspects. They demonstrate fiscal responsibility in the engineering plans and working alongside our Finance Director, and they assist in locating and providing guidance to applying for qualified grants and loans for our planned water/wastewater system facility.

FEI Engineers worked directly with our Town Engineer and Public Works Director in coordination of the construction scheduling requirements, as well as providing staff reports to our Board of Trustees. They provide marketing and public relations support by having a presence at our community development events which included Development Review Committee, support economic development outreach, and State of the Town.

We would encourage you to consider FEI Engineers for professional engineering services for the Town of Lochbuie. We look forward to our continued professional relationship with FEI Engineers for years to come.

Sincerely,

Trish Stiles
